Advisory Action

Applicant's arguments regarding "added hafnium" are not persuasive.

Applicant states that the "added" does structurally limit the article over that of the prior art. The term "added" has not been shown to alter the microstructure of the coating. Applicant argues that there is no explicit disclosure in Schaeffer that the coating contains hafnium. Please refer to column 5, lines 15-20 of Schaeffer where it clearly states that the remainder of the coating composition is formed of components of the bulk composition of the substrate alloy. The substrate alloy contains 1.5 wt% hafnium.
